## **Section 1**

### **Specifications**

## **Repair and upgradation of Computers**

### **1. Introduction:-**

Pakistan Meteorological Department (PMD) is an Executive Department of Government of Pakistan, Ministry of Defence (Defence Division), Islamabad. PMD provides valuable meteorological & seismological services to different stakeholders in the country including private and public sector.

The Research & Development (R&D) Division plays a critical role in the analysis, modelling, and forecasting of meteorological events. Current computing resources are no longer sufficient for the increasing complexity of numerical weather prediction (NWP) models, data assimilation systems, and real-time monitoring tools.

To enhance research capacity, improve accuracy of forecasts, and ensure timely scientific outputs, it is necessary to upgrade the existing computer systems with high-performance, energy-efficient, and reliable units.

### **2. Purpose**

This upgrade will:

- Improve processing speed for large datasets (climate models, satellite data).
- Enhance capability for real-time analytics and visualization.
- Support advanced modelling tools
- Increase operational reliability and reduce downtime.
- Provide adequate resources for future R&D requirements.

### **3. Justification**

#### **A. Scientific Justification**

- Climate models require high-performance computing to run efficiently.
- Larger datasets (radar, satellite) need faster I/O and processing.
- Improved computing reduces model runtime from hours to minutes, increasing lead time for warnings.

#### **B. Operational Justification**

- Current systems experience slow performance and frequent crashes during modelling tasks.
- Upgraded systems support future integration with regional and global forecasting networks.
