SPECIFICATIONS

[Note for Preparing the Specifications]

A set of precise and clear specifications is a prerequisite for bidders to respond realistically and competitively to the requirements of the user without qualifying their Bids. The specifications must be drafted to permit the widest possible competition and, at the same time, present a clear statement of the required standards of workmanship, materials, performance of the works. Only if this is done objectives of economy, efficiency, and fairness in procurement will be realized and responsiveness of Bids can be ensured, and the subsequent task of bid evaluation can be facilitated. The specifications should require that materials to be incorporated in the works be new, unused, and of the most recent or current models, and incorporated all recent improvements in design and materials unless provided for otherwise in the contract.

Samples of specifications from similar to previous procurements are useful in this respect. The use of metric units is encouraged. Depending on the complexity of the works and the repetitiveness of the type of procurement, it may be advantageous to standardize the Technical Specifications that should cover all classes of workmanship, materials and equipment although not necessarily to be used in a particular procurement.

Care must be taken in drafting specifications to ensure that they are not restrictive. In the specification of standards for equipment, materials, and workmanship, recognized international standards should be used as much as possible. The specifications shall consider all conditions but not limited to seismic conditions, weather conditions and environmental impact. The specifications should state that equipment, materials, and workmanship that meet other authoritative standards, and which ensure at least a substantially equal quality than the standards mentioned, will also be acceptable. The following clause may be inserted in the Specifications.

Sample Clause: Equivalency of Standards and Codes

Wherever reference is made in the Specifications to specific standards and codes to be met by Works to be furnished and tested, the provisions of the latest current edition or revision of the relevant shall apply, unless otherwise expressly stated in the Contract. Other authoritative standards that ensure equivalence to the standards and codes specified will be acceptable.]

Launched in 2009 under the Economic Cooperation Organization, the 6,500-kilometer ITI freight corridor runs through Pakistan, Iran and Turkey but has operated only intermittently since 2012 due to security and operational challenges. Pakistan and Iran agreed in December 2025 to resume the service.

The latest understanding between Islamabad and Ankara was reached during a delegation-level meeting between Pakistan's Federal Minister for Railways Muhammad Hamid Abbasi and Turkish Minister of Transport and Infrastructure Abdullahi Uralolu during Abbasi's two-day official visit to Turkey, according to a statement issued by Pakistan's Ministry of Railways.

On his official account after the meeting, the Pakistan Railways statement said the ITI corridor is a strategic project to strengthen trade and regional connectivity between South Asia, Central Asia and Europe. The two sides also reviewed Pakistan Railways' Rohri-Taftan Main Line-3 (ML-3) upgrade, a strategic route linking central Pakistan with the Iranian border that Islamabad hopes will boost cross-border freight traffic and regional trade. They also discussed progress on the Karachi-Rohri Main Line-1 (ML-1) project, part

remaining sections of the railway infrastructure projects. The ministers also explored the possibility of joining the Turkish-Uzbekistan railway transfer, digital railway

cooperation for the project. Beyond infrastructure, Pakistan and Turkey agreed to expand cooperation in technology transfer, digital railway

including the production of passenger coaches, freight wagons and railway equipment using Turkish technology.
