Signature & Stamp of Bidder

24.5 If a bid is not substantially responsive, it will be rejected by the Procuring agency and may not subsequently be made responsive by the Bidder by correction of the nonconformity.

25. Evaluation and Comparison of Bids

25.1 The Procuring agency will evaluate and compare the bids which have been determined to be substantially responsive, pursuant to ITB Clause 24.

25.2 The Procuring agency's evaluation of a bid will be on delivered duty paid (DDP) price inclusive of prevailing duties and will exclude any allowance for price adjustment during the period of execution of the contract, if provided in the bid.

25.3 The Procuring agency's evaluation of a bid will take into account, in addition to the bid price quoted in accordance with ITB Clause 11.2, one or more of the following factors as specified in the Bid Data Sheet, and quantified in ITB Clause 25.4:

(a) incidental costs

(b) delivery schedule offered in the bid;

(c) deviations in payment schedule from that specified in the Special Conditions of Contract;

(d) the cost of components, mandatory spare parts, and service;

(e) the availability Procuring agency of spare parts and after-sales services for the equipment offered in the bid;

(f) the projected operating and maintenance costs durin*g the life of the equipment;

(g) the performance and productivity of the equipment offered; and/or

(h) other specific criteria indicated in the Bid Data Sheet and/or in the Technical Specifications.

25.4 For factors retained in the Bid Data Sheet pursuant to ITB 25.3, one or more of the following quantification methods will be applied, as detailed in the Bid Data Sheet:

(a) Incidental costs provided by the bidder will be added by Procuring agency to the delivered duty paid (DDP) price at

the final destination.

(b) *Delivery schedule.*

(i) The Procuring agency requires that the goods under the Invitation for Bids shall be delivered at the time specified in the Schedule of Requirements which will be treated as the base, a delivery "adjustment" will be calculated for bids by applying a percentage, specified in the Bid Data Sheet, of the DDP price for each week of delay beyond the base, and this will be added to the bid price for evaluation. No credit shall be given to early delivery.

or

(ii) The goods covered under this invitation are required to be delivered (shipped) within an acceptable range of weeks specified in the Schedule of Requirement. No credit will be given to earlier deliveries, and bids offering delivery beyond this range will be treated as nonresponsive. Within this acceptable range, an adjustment per week, as specified in the Bid Data Sheet, will be added for evaluation to the bid price of bids offering deliveries later than the earliest delivery period specified in the Schedule of Requirements.

or

(iii) The goods covered under this invitation are required to be delivered in partial shipments, as specified in the Schedule of Requirements. Bids offering deliveries earlier or later than the specified deliveries will be adjusted in the evaluation by adding to the bid price a factor equal to a percentage, specified in the Bid Data Sheet, of DDP price per week of variation from the specified delivery schedule.

(c) *Deviation in payment schedule.*

(i) Bidders shall state their bid price for the payment schedule outlined in the SCC. Bids will be evaluated on the basis of this base price. Bidders are, however, permitted to state an alternative payment schedule and indicate the reduction in bid price they wish to offer for such alternative payment schedule. The Procuring agency may consider the alternative payment schedule offered by the selected Bidder.

or

(ii) The SCC stipulates the payment schedule offered by

the Procuring agency. If a bid deviates from the schedule and if such deviation is considered acceptable to the Procuring agency, the bid will be evaluated by calculating interest earned for any earlier payments involved in the terms outlined in the bid as compared with those stipulated in this invitation, at the rate per annum specified in the Bid Data Sheet.

(d) *Cost of spare parts.*

(i) The list of items and quantities of major assemblies, components, and selected spare parts, likely to be required during the initial period of operation specified in the Bid Data Sheet, is annexed to the Technical Specifications. The total cost of these items, at the unit prices quoted in each bid, will be added to the bid price.

or

(ii) The Procuring agency will draw up a list of high-usage and high-value items of components and spare parts, along with estimated quantities of usage in the initial period of operation specified in the Bid Data Sheet. The total cost of these items and quantities will be computed from spare parts unit prices submitted by the Bidder and added to the bid price.

or

(iii) The Procuring agency will estimate the cost of spare parts usage in the initial period of operation specified in the Bid Data Sheet, based on information furnished by each Bidder, as well as on past experience of the Procuring agency or other procuring agencies in similar situations. Such costs shall be added to the bid price for evaluation.

(e) *Spare parts and after sales service facilities in the Procuring agency's country.*

The cost to the Procuring agency of establishing the minimum service facilities and parts inventories, as outlined in the Bid Data Sheet or elsewhere in the bidding documents, if quoted separately, shall be added to the bid price.

Signature & Stamp of Bidder

(f) *Operating and maintenance costs.*

Since the operating and maintenance costs of the goods under procurement form a major part of the life cycle cost of the equipment, these costs will be evaluated in accordance with the criteria specified in the Bid Data Sheet or in the Technical Specifications.

(g) *Performance and productivity of the equipment.*

(i) Bidders shall state the guaranteed performance or efficiency in response to the Technical Specification. For each drop in the performance or efficiency below the norm of 100, an adjustment for an amount specified in the Bid Data Sheet will be added to the bid price, representing the capitalized cost of additional operating costs over the life of the plant, using the methodology specified in the Bid Data Sheet or in the Technical Specifications.

or

(ii) Goods offered shall have a minimum productivity specified under the relevant provision in the Technical Specifications to be considered responsive. Evaluation shall be based on the cost per unit of the actual productivity of goods offered in the bid, and adjustment will be added to the bid price using the methodology specified in the Bid Data Sheet or in the Technical Specifications.

i. *Specific additional criteria indicated in the Bid Data Sheet and/or in the Technical Specifications.*

The relevant evaluation method shall be detailed in the Bid Data Sheet and/or in the Technical Specifications.

79th Independence Day

Governor felicitates people of GB

RECORDER REPORT

KARACHI: Sindh Governor Syed Muhammad Nehal Hashmi has extended heartfelt congratulations to the people of Gilgit-Baltistan on their 79th Independence Day, paying tribute to their historic struggle for freedom, sacrifices and unwavering commitment to Pakistan.

In his special message, the governor said the people of Gilgit-Baltistan had secured freedom through a historic struggle against Dogra rule before acceding to Pakistan. Their patriotism and sacrifices remained a source of pride for the entire nation, he added.

Highlighting the region's development, Hashmi said former prime minister Muhammad Nawaz Sharif had initiated several landmark infrastructure projects, including the extension of the Karakoram Highway, construction and improvement of the Gilgit-Skardu Road and the China-Pakistan Economic Corridor (CPEC), which had contributed to better connectivity, economic activity and development opportunities.

He said several development initiatives were currently underway in Gilgit-Baltistan under the leadership of Prime Minister Muhammad Shehbaz Sharif, particularly in the energy, education and employment sectors.

The 16-megawatt Nalhar hydropower project, a 100-megawatt solar energy project and the establishment of four Danish Schools were among the key initiatives aimed at strengthening the region's infrastructure, expanding educational opportunities and improving public welfare, he added.

The Governor described Gilgit-Baltistan as a precious national asset, blessed with spectacular natural beauty, immense tourism potential and talented people.

He emphasised that protecting the region's prosperity and ensuring better opportunities for its people in education, energy and employment was a collective national responsibility.

Weekly Cotton Review

A downward trend continues in the market

NASEEM USMAN

KARACHI: The downward trend in cotton prices continued in the domestic market, while trading activity remained satisfactory. However, the deteriorating quality of locally produced cotton has emerged as a major concern for textile spinners, who are already struggling with rising production costs and uncertainty over the availability of quality raw material.

According to cotton market analysts, New York cotton prices have also declined, but importing cotton has become increasingly difficult due to escalating tensions between Iran, the United States and other countries in the region. A substantial increase in international freight charges has further complicated import arrangements and raised the cost of imported cotton.

The textile sector and other industries are already facing serious challenges due to high interest rates and expensive energy. Instead of providing relief to industrial consumers, the cost of electricity is being increased further. An increase of Rs2.56 per unit in electricity tariffs is expected to generate an additional Rs33 billion from consumers, reportedly. Meanwhile, independent reports say that energy prices could increase two to three times during the first three months of the coming year.

The Power Division has also warned that December, January and February could prove particularly difficult for electricity consumers, raising concerns about the future cost of doing business and the competitiveness of export-oriented industries.

The deteriorating quality of domestic cotton has further aggravated the problems of textile spinners. Industry stakeholders believe that the declining quality of raw cotton could affect yarn production and increase manufacturing costs, particularly at a time when importing better-quality cotton has become difficult because of regional tensions and higher freight charges.

Meanwhile, exporters have stressed that the revival of Pakistan's cotton sector requires collective efforts and shared responsibility among the government, farmers, ginners and textile manufacturers. Improving cottonseed quality, increasing per-acre yields and ensuring the availability of high-quality raw material are considered essential for strengthening the country's cotton and textile industries.

As part of its cotton sector revival strategy, Pakistan has planned a fast-track approval mechanism for imported cotton seeds. However, the existing approval process reportedly takes around 12 months, causing delays in the introduction of improved seed varieties. Industry stakeholders believe that the process needs to be streamlined to ensure the timely availability of quality seeds and improve domestic cotton production.

Separately, the Federal Board of Revenue (FBR) has finalised a deadline for the installation of surveillance cameras at textile units. The measure is aimed at strengthening monitoring and ensuring compliance with the prescribed requirements by industrial establishments.

In another development, India has extended its duty-free cotton import facility by two months to moderate domestic prices and ensures an adequate supply of raw material for its textile industry. The decision is intended to maintain price stability and facilitate cotton imports for domestic manufacturers.

Cotton market observers believe that Pakistan's cotton and textile sectors require a coordinated strategy to address the challenges facing the industry. They emphasised that ensuring the availability of quality seeds, improving domestic cotton production, controlling energy costs and maintaining consistency in government policies are essential for the sustainable revival of the cotton sector and strengthening the country's textile exports.

Cotton prices in the local market continued to fall during the past week, pressured by a persistent drop in New York futures and deterioration in the quality of domestically produced cotton. Poor quality has further eroded prices, while textile spinners remain cautious about buying raw cotton.

Market sources blamed the quality decline on blending by some ginners, who are mixing different grades to clear their stocks rather than improving quality. Others are trying to produce better cotton but are struggling with the shorter staple length of seed cotton (phutti).

Boarish sentiment dominated the market overall. Falling cotton yarn prices and a severe liquidity crunch were also cited as key reasons for the continued weakness.

The textile sector is already under strain. Industrialists have been calling for a cut in the policy interest rate to ease financial pressure, but the State Bank of Pakistan instead raised it by 50 basis points to 12 per cent.

Industry players are also grappling with high energy costs, while heavy imports of cheaper fabric and yarn from China are hurting domestic manufacturers. Industry representatives further see the Federal Board of Revenue (FBR) as an additional obstacle to business activity.

In Sindh and Punjab, cotton traded between Rs16,000 and Rs18,000 per maund, depending on quality and payment terms, while Balochi cotton fetched Rs18,700 to Rs19,000 per maund. Conditions in Balochistan were similar.

Seed cotton (phutti) prices in Sindh, Punjab and Balochistan ranged from Rs7,000 to Rs9,000 per 40 kg, depending on quality.

The Spot Rate Committee of the Karachi Cotton Association decreased the spot rate by Rs 2,00 per maund and closed it at Rs Rs17,800 per maund.

Naseem Usman, chairman of the Karachi Cotton Brokers Forum, said bearish conditions were also prevailing in the international market, with New York cotton futures trading between 79 and 84 US cents per pound.

According to the US Department of Agriculture's (USDA) weekly export sales report, 216,500 bales were sold for the 2026-27 season. China was the top buyer at 52,100 bales, followed by Türkiye (40,800) and Vietnam (35,000).

Exports during the reporting period came to 160,800 bales. Vietnam was the main destination, taking 65,200 bales, followed by Pakistan (26,400) and Türkiye (13,900).

The Federal Board of Revenue (FBR) on Monday directed all textile spinning units to install video surveillance cameras by November 15, 2026 for monitoring of production, cotton bales and processing of natural, man-made and blended fibres in loose including cotton, polyester, viscose, wool and acrylic.

In this regard, the FBR has issued a Sales Tax General Order No 30 of 2026 - IR Operations on Monday.

The FBR has issued additional requirements for the textile spinning units for electronic monitoring of production by installation of video surveillance cameras on textile processing machinery to monitor the processing of natural, man-made and blended fibre in loose, opened or other non-bale forms, including cotton, polyester viscose, wool and acrylic.

Consumers could face a difficult winter, with sources in the Power Division warning that December, January and February may bring particularly expensive electricity. The Fuel Price Adjustment (FPA) could rise two to three times during these months, they said, as higher prices for LNG, coal and other fuels push power generation costs to exceptionally high levels.

Reviving Pakistan's cotton sector will take more than improved seeds and modern technology, according to a proposed framework. It calls for an integrated economic approach in which every stakeholder plays a role suited to its resources, expertise and commercial interests.

One proposal is to set aside Rs15 billion to Rs20 billion a year for a comprehensive cotton revival programme. It would cover government-led research, seed development, modern production technologies, protection for growers and measures to keep market prices stable.

A minimum support price of Rs10,000 per 40 kilogrammes of seed cotton has also been floated. However, the price should reflect production costs, market conditions and the government's financial capacity.

The proposal also suggests strengthening the Trading Corporation of Pakistan (TCP) and making its role more effective, as a way to curb sharp swings in market prices.

Pakistan's cotton revival strategy should focus on improving farmers' profitability, reducing production costs and strengthening the competitiveness of cotton against alternative crops, as the country's textile industry, ginners, agricultural input suppliers, research institutions and growers need to work together to revive the declining cotton sector.

The All Pakistan Textile Mills Association (APTMA), textile mills and ginners should take concrete measures to promote contract farming in Punjab and Sindh through transparent agreements covering the provision of quality agricultural inputs, including seeds, fertilisers and pesticides, technical assistance, reasonable prices, guaranteed procurement of produce and timely payments.

Similarly, companies manufacturing seeds, fertilisers and pesticides should voluntarily allocate 5 to 7 per cent of their annual net profits to support farmers through special discounts on agricultural inputs and the provision of technical services, helping reduce cultivation costs.

Research institutions, including the Pakistan Central Cotton Committee (PCCC), Cotton Research Institute (CRI) Multan and CRI Sakrand, also require sustained government investment to develop climate-resilient and pest-resistant cotton varieties, improve fibre quality and introduce modern, cost-effective technologies. Private research institutions can contribute through innovations, investment and scientific collaboration.

Agricultural extension services should provide region-specific recommendations in line with local requirements and climatic conditions, while their performance should be evaluated on the basis of improvements in per-acre yields and farmers' profitability.

Cotton growers, meanwhile, should adopt certified seeds, Integrated Pest Management (IPM), efficient water utilisation and improved agricultural practices. Farmers' organisations can also facilitate access to modern technologies and markets.

The proposed approach emphasises shared responsibility, with the government providing a supportive policy environment and the private sector, research institutions, agricultural input suppliers and farmers contributing through investment and practical measures.

The success of the strategy should be assessed against its ability to reduce production costs, increase net profits per acre and improve cotton's competitiveness against alternative crops.

Meanwhile, Federal Minister for National Food Security and Research Rana Tanveer Hussain has directed the relevant authorities to examine a proposed fast-track approval mechanism for imported cotton seeds, aimed at reducing the approval period from approximately seven years under the existing procedure to 12 to 18 months.

Rare tree from dinosaur-era lineage puts out full crown

LAHORE: A 176-year-old Queen Sago Palm, a member of a plant lineage older than the dinosaurs, is in full leaf at Lawrence Garden, an officer of the Punjab Horticulture Authority (PHA) disclosed here on Sunday.

The tree predates the historic garden, which was developed in the 1860s as a botanical garden and leisure ground. He said the garden was modelled on London's Kew Gardens.

Queen Sago Palms are Cycads, an ancient group of seed-bearing plants whose fossil record dates to the Permian period, about 280 million to 300 million years ago. The world's oldest potted plant, a Cycad, has been at Kew since 1775.

Cycads became particularly widespread during the Mesozoic Era, when dinosaurs dominated the Earth. Their abundance during the Jurassic and Cretaceous periods has led to the era being described as the "Age of Cycads", alongside the "Age of Dinosaurs".

Plant-eating dinosaurs, including long-necked sauropods, are believed to have fed on the foliage, cones, and nutrient-rich seeds of Cycads, including Sago Palm, which were widespread in the Mesozoic era.

Cycads are also known for their exceptionally slow growth and longevity. According to horticulture experts, Sago Palms require around four to five hours of sunlight daily and relatively little water once established. Their slow-growing nature allows them to survive in a range of growing conditions, including relatively dry and poor soils.

Their structure has changed little over hundreds of millions of years, so they are commonly called "living fossils". However, their numbers have declined considerably, and about 60 per cent of assessed species are now threatened with extinction in their natural habitats, according to the International Union for Conservation of Nature (IUCN) Red List of Threatened Species, the global inventory of extinction risk.

Commenting on the development, the spokesperson said the PHA looks after the province's green cover and also manages some of the world's oldest prehistoric trees. "The fact that the Sago Palm in Lahore is not only prehistoric but also belongs to a threatened variety makes it especially significant," he said.—SAFDAR RASHEED
