Scope of Work

Internet link for PRAL Datacenter

Scope of the Work:

The following scope of work identifies the tasks and responsibilities that the qualifying Company/Firm shall deliver upon, by working closely with the Network & Infrastructure Department of PRAL:

Scope of work for the Provisioning of CIR internet Connectivity Services at fbr Datacenter:

Scope of Work and Mandatory requirements:

- PRAL requires robust and reliable Internet connectivity setup with automatic failover capabilities, providing high availability and minimizing downtime in case of link failures two redundant Internet connectivity links(Active-passive) are required from service providers.
- The service provider must provide IP bandwidth on redundant IP backbone (SWME-3, SWME-4 ,TW1 or PEACE etc) and self-healed redundant fiber with redundant Last Mile at PRAL Datacenter Islamabad located at FBR House, Constitution Avenue, Sector G-5, Islamabad, Pakistan.
- CIR (Committed Information Rate) IP bandwidth with the primary last mile connectivity provided via Fiber and the secondary last mile connectivity in a redundant form with an alternate physical fiber ring in a passive state is required for PRAL Datacenter Islamabad located at FBR House, Constitution Avenue, Sector G-5, Islamabad, Pakistan.

- The bidder must provide an independent and fully redundant internet connectivity solution that does not rely upon or share dependency with the currently operational primary service provider infrastructure deployed at PRAL Datacenter.
- Bidders are required to submit solution with two up streams along with information about which submarine cable is being used as primary and backup e.g. SWME-3, SWME-4, TW1 or PEACE etc.
- A pool of 16 public IP addresses, consisting of a whitelisted IP subnet, is required. The assigned IPs must not have any malicious history or negative reputation. The ISP shall provide these 16 public IPs separately from the default point-to-point public IPs. PRAL will allocate and utilize these public IPs for its services.
- **The ISP shall provide clean bandwidth and ensure protection against Distributed Denial of Service (DDoS) attacks.**
- However, bidders are required to submit separate quotations for public IP pools of 4, 8, 16, and 32 IP addresses. PRAL reserves the right to procure the link either with or without an IP pool and may increase the IP pool size during the contract period based on operational requirements.
- The service provider Must have sufficient bandwidth available at its local POP from both sources e.g SWME-3, SWME-4 ,TW1 or PEACE etc so that in case of outage of one source, traffic could be automatically switched to other source without any congestion. Last mileMust be redundant but from different POPs on different fiber legs and selfheal ring connectivity.
- The ISP must be a licensed telecom operator in Pakistan with an established and fully operational network infrastructure, including local technical support and dedicated last-mile connectivity capability within Islamabad/Rawalpindi. **The bidder must have direct operational control over its core network and must ensure that the infrastructure used for service delivery is not shared.** The ISP shall remain fully responsible for end-to-end service delivery, redundancy, and fault management.

- Information of IP bandwidth from both sources is required to be submitted by the bidders. Document of the entire network topology, including the redundant Internet links, BGP configuration and failover procedures is required. Further network diagrams that illustrate the flow of traffic and the redundancy mechanisms in place is also required.
- The bidder Must have at least two upstream service providers so that incase of failure at one upstream the services can be shifted to another available upstream. The ISP Must ensure that these backbone fibers are physically diverse and do not share the same path or infrastructure to minimize the risk of a single point of failure.
- To ensure redundant last-mile connectivity, the ISP shall provide primary and secondary fiber links with automatic failover capability. In the event of a failure on the primary active link, traffic shall seamlessly switch to the secondary standby link without manual intervention. The ISP shall configure and manage the failover mechanism to ensure service continuity between both links. **The ISP shall also provide redundant termination devices, including two ONTs and two routers/switches, to support high availability and BGP configuration.**
- In the event of a failure on one of the ISP backbone fibers or last mile connections, the device Must automatically reroute traffic to the other active link, ensuring uninterrupted connectivity.
- Configure one of the ISP connections as the primary (active) link, and the other as the secondary (passive) link. The primary link Must handle all traffic under normal conditions, while the secondary link Must remain idle and ready to take over if the primary link fails.
- **Ensure that all networking equipment has redundant power supplies or redundant power sources to minimize the risk of power-related outages.**
- Configure proactive alerts for any link failures or abnormal conditions to ensure prompt response and issue resolution. Clarify the support channels and escalation procedures in case of network or service disruptions.

- The service provider is required to grant access to the NMS(PRTG, MRTG etc) portal preferably for daily bandwidth monitoring and traffic graphs with detail insight of the traffic on hourly, daily, weekly, monthly basis and yearly.
- Local support Must be available all the time 24x7 and response time Must be less than 1 hour.
- The Service Provider shall be responsible for all civil work related to the installation of the Fiber Optics, cabling of data, grounding, earthing as well as channeling and all other works pertaining to the installation. The Service Provider will be responsible for the quality of the work and will assume full responsibility in case of damage to PRAL building and/or property while carrying out the same.
- PRAL requires help line numbers and technical Key Account Manager/Focal Person to be provided where problems may be immediately reported, and a quick process initiated to identify and rectify the problem. The office, mobile number and email addresses of operational staff must be provided for immediate escalation of the problem. In case of absence or leave of the primary responsible resource, the backup resource contact numbers will also be provided by the Service Provider and his presence during that period will be ensured to PRAL.
- All PTA or any other Licenses required will be the sole responsibility of the bidder/Service Provider.
- PRAL reserves the right to select the IP bandwidth as per our own discretion (table enclosed).
- Bidders are also required to submit prices for each of these bandwidths as CIR.
- The bidder must provide written evidence that bandwidth is not congested and cached over the acquisitioned links.
- Initially PRAL requires 100 Mbps bandwidth from the service provider, but PRAL reserves the right to change the Bandwidth as per the requirement of the business during the contract period.
- The bidder Must have its own help desk/ticketing system.

- The service provider will ensure that PRAL at all times has the guaranteed bandwidth available as requested and signed off in the confirmation of commissioning of the leased circuits.
- The proposed solution Must be scalable to 1 Gbps considering possible future expansion.
- All fiber optic termination / configuration equipment's required shall be service provider's responsibility.
- The solution Must be on a turn-key basis including ISP hardware equipment, media acquisition, installation/integration/configuration/commissioning and services.
- Fiber optic link will be on turnkey basis which includes but is not limited to, items like laying of fiber cable, ODF / ONT, SFPs.
- The bidder Must have at least two upstream service providers so that in case of failure at one upstream the services can be shifted to another available upstream. Both the last miles are required to be terminated separately in a way that failover capability can be achieved. It is the responsibility of the vendor to provide all the relevant SFP's or hardware for provisioning of the procured bandwidth.
- In case of any hardware failure, backup equipment Must be available. Faulty device Must be replaced within next business day from the complaint escalated time.
- The response time of the engineers will be counted from the fault reporting time to the arrival/response of the respective engineer.
- PRAL reserves the right to activate or de-activate the link or withdraw the tender at its sole discretion.
- Service provider Must be capable to restrict/allow/filter specific traffic on the requirement basis of PRAL.
- The bidder requires to provide 99.9% uptime and any reduction in uptime will be deducted from MRC as per the penalty clauses accordingly.

- Service provider shall provide 24x7x365 service and response engineer's mobile number to be provided to PRAL for direct support during off hours.
- The bidders must ensure to provide the committed bandwidth to PRAL, upload and download speed Must be same.
- Bidders are required to quote bandwidth slab rates. Depending upon the requirement, the PRAL may request to increase or decrease the bandwidth as per quoted rates. Whenever bandwidth is increased or decreased, the bill will be charged on a prorated basis. No addendum to SLA will be required for this purpose. In case cached bandwidth is observed the PRAL management reserve the right to impose penalty, based upon the verified report of technical team.
- The ISP must not intercept, log, or share PRAL's traffic data with third parties without written consent.
- Scheduled Maintenance Notification: Require minimum 72-hour advance notice in writing for any planned maintenance window, with maintenance windows restricted to off-peak hours
- Monthly SLA compliance reports should be submitted by the ISP to PRAL's technical team, covering uptime, latency, packet loss, jitter, and any incidents.

Note: The bidder Must have at least two upstream service providers so that in case of failure at one upstream the services can be shifted to another available upstream. Both the last miles are required to be terminated separately in a way that failover capability can be achieved.
